Overview Data Code Models Discussion Leaderboard Rule

Overview

⚠️ Challenge update (5 March 2026) ⚠️

We released an updated version of the CircleID dataset to fix an issue in the previous **evaluation data**. **Only the evaluation split was affected**. The training data and file format are unchanged, so **no retraining is required**.

What changed:

- The evaluation files were replaced and `test.csv` was updated accordingly. New evaluation filenames use a **`v2_` -prefix**.
- Please **re-download the competition data**, then **run inference on the new `test.csv` and resubmit**.
- The leaderboard has been **rescored** to keep comparisons fair, so **score shifts are expected**.

Bonus data:

- The previous test set is available as optional extra training data in `additional_train.csv`. Unknown writer identities are not revealed and remain labeled `writer_id = -1` by design.

Note: The same evaluation update applies to the pen classification competition as well.
